# Why Security Is Important

## Players

Hackers  
Competitors  
Foreign Governments

## Impact

Financial  
Reputational  
Legal / Regulatory

**DevOps: Security is now everyone's responsibility.....**

# Why Spring Security?

---

# Spring Security

**Authentication and authorization for enterprise applications**

**Application layer security for Java, J2EE**

**Highly customizable**

**Protects against common security threats**

# Benefits of a Layered Security Approach

---

“Defense in depth (also known as Castle Approach) is that layered security mechanisms increase security of the system as a whole. If an attack causes one security mechanism to fail, other mechanisms may still provide the necessary security to protect the system”

Hashing

# What's in It for You?

---

# Things You Will Learn

**Form, Basic, and Digest Authentication**

**Remember me**

**HSTS - HTTP Strict Transport Security**

**JWT - Java Web Tokens**

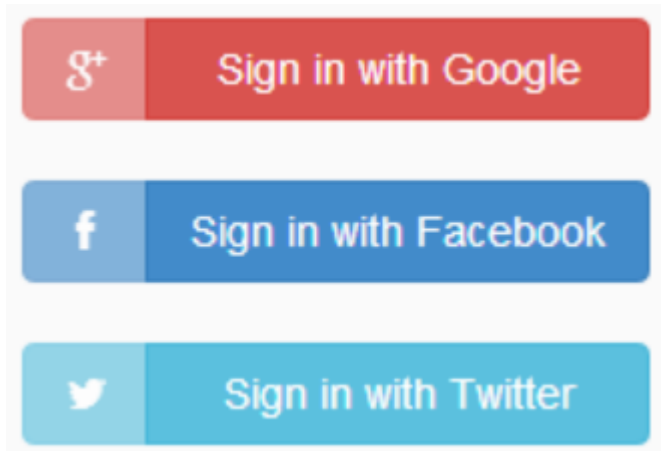

**Spring Social for OAuth 2.0 and Open Id**

**BCrypt – modern password hashing**

**Testing Spring Security**

# User Sign In

☒ Remember Me [Forgot Password?](#)

# Two-factor Authentication

## 2-Step Verification

Enter the verification code generated by your mobile application.

Verify

# Benefits

**Debug**

**Customize**

# What Is Under the Covers

**Authentication**

**Authorization**

**Exception handling**

**Modernized password  
encoding**

# Prerequisites

**Spring framework**

**Spring MVC**

**Java 8**

**Maven 3**

**Spring Tool Suite 3.9+**

**Lombok setup**

# Demo

Setting up Lombok

Introducing the demo

# Summary

Key selling points of Spring Security

Layered security approach

Described what you will gain from this course

Prerequisites
